

ESI LIVE FRANCE – 16 Mars 2021

Titre de la présentation

« Impact des simulations crash sur l'efficacité du plan de validation et la réduction des coûts prototype »

“Impact of crash simulation into validation plan efficiency and prototype cost reduction.”

Intervenant

Olivier Colmard

Integrated Computer Aided Engineering & Product Lifecycle Management,
Vice President

Renault Group Engineering Division

Résumé de la présentation

« Impact of crash simulation into validation plan efficiency and prototype cost reduction. Numerical simulation is an enabler of engineering performance. During last years, digital acceleration allowed to make robust automotive conception phases and avoid expensive costs during physical validation. Based on Clío5 example, we will illustrate all progress in performance and will define next steps to go toward numerical validations only »
